

Vopagreen LDPE

In a Circular Economy context, Post Industrial Recyclate (PIR) represents a safe and reliable resource for producing plastic films that meet all standards demanded by the food and industrial film market. Vopa-Green came from the need to increasingly strengthen the Circular Economy within the plastic film industry. Vopa-Green formulations contain a minimum of 30% and a maximum of 100% PIR. Our R&D plans have led to the development of food formulations that fully respect all aspects of the Circular Economy. The Vopa-Green High-Density Polyethylene (HDPE) line is produced in mono-extrusion or co-extrusion, ensuring full traceability of the by-product that generates the film/tubing. Vopa-Green is certified by CSI with License RPP200082.

Features

Band

200 mm-1950 mm
